Justine Freisleben
VP, Industry Relations
Healthcare Distribution Alliance

BLOCKCHAIN NETWORK (REPLICATION-BASED)

PEER-TO-PEER NETWORK (SUBSCRIBE/PUBLISH BASED)

November 2019 - April 2020

Goals for this period: Ensure a functioning, stable network that companies are confident enough to load GTINs into the LD for querying.

Basic Level

- True/False
- Missing GTIN
- Negative responses (GTIN, SN, EXP) with multiple service providers and types of manufacturers
- Expiration date "00"
- Expired product dating (product that's beyond expiry)
- Capital versus lower case

Advanced Level

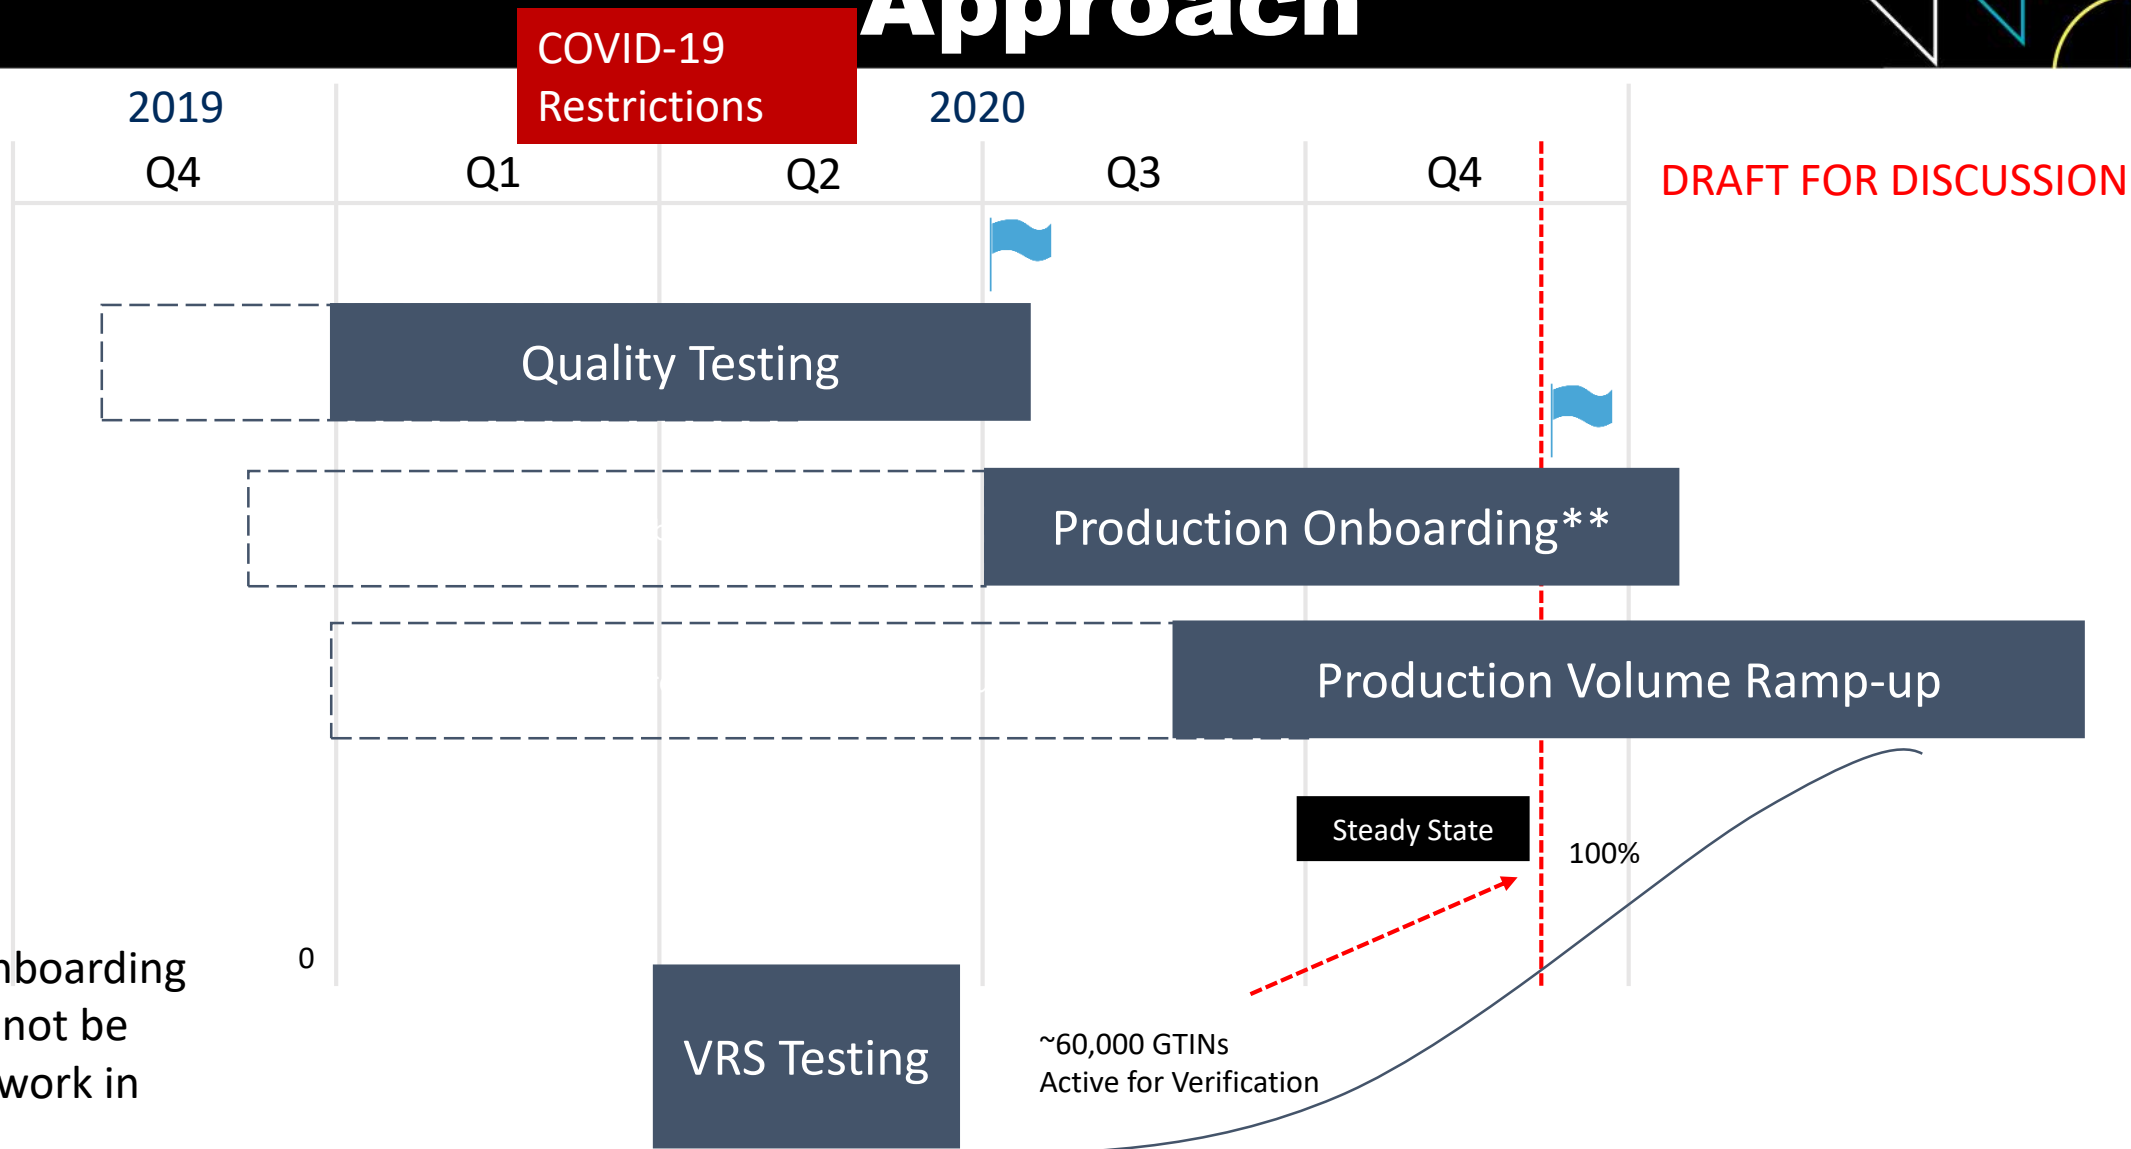

- LD synchronization testing
- Divestitures and Acquisitions
- Load Testing

Risk Assessment

Will be conducted at the end based on the results of the testing to decide if industry is ready to move forward to a production environment.

Each company has specific requirements and moving forward is an individual business decision.

Enforcement Discretion: Industry Approach

** if production onboarding moves to July, will not be able to deploy network in time for 11/2020
