## Bank Reconciliation Upload and Review Process (CASE 14282)

DJF 11/23/15

## Overview:

This process is intended to simplify and streamline the bank reconciliation process in MDS by allowing you to upload a spreadsheet/text file of your bank statement and match the data to your existing MDS Check and Cash Batches. While all transactions in the statement may not match you can use this process to match the checks and cash deposits that are exact matches and or manually update which check they (your bank) is referencing.

The format of the upload file is based upon the heading in the spreadsheet and the MDS system expects four key pieces of information per line DATE, AMOUNT, CHECKNO, DESC.

These fields must be in row one to identify the column to upload. If not the column will be skipped.

For your convenience you can click on the Template Button once in the program to download a sample spreadsheet with headings.

If the check number is not available you can still upload the line but will manually match it.

READY			Ħ				100%

Examples above show deposits, checks and ach debits and credits. If you are using the MDS ACH transfer subsystem all of the transactions will appear on your bank reconciliation, if not you can enter those as Journal Entries manually during the reconciliation process.

The Result of this process is the same as the standard bank reconciliation it only serves to help you in the matching and data entry portion of the program.

Step 1. Uploading your data/spreadsheet

Using the account reconciliation menu choose the option for bank reconciliation upload.

The	Systems Hou	se Ready						-	1/23/2015 14:31			

Select OK/END – (OR HIT F2) to process your file.

This screen will display what was imported from the bank statement, in the event of errors in your upload

An error report will be generated and you can start over again.

This upload is only used to update the flags in the system and can be uploaded multiple times if need be.

To select an item to clear, either click on the column for Cash Batch or Check# or enter the number to match to or choose inquiry to select the item from a drop down. \

In our example we have a check# 111111 for 100.00 that the bank says came in on 10/30/13 so it automatically matched and cleared that check.

The "C" column now shows as Green to indicate that item has been cleared , please note this is the preliminary step and you can review and change in the next screen or update there.

The second item is a cash batch from 10/30/15 for 10,000 dollars – note – this is dependent upon when your cash entry operator/ administrator ran the Cash Batch Update, so cash batch totals may not always easily tie out.

Currently if you have multiple cash batches that tie to a single deposit line in the bank spreadsheet you cannot chose those in this maintenance but you can clear them on the next screen. The same is true if you have multiple deposit lines in your spreadsheet that tie to a single cash batch.
